

## The Refractometer - A Useful Tool for Measuring the Concentration of Industrial Fluids

The appropriate concentration of an industrial solution, such as a cutting fluid, is vital to its effectiveness. Refractometers are often used as an economical method to determine the concentration of water soluble fluids, such as cutting fluids, hydraulic fluids, plating baths, coolants and battery acid. A. Krüss Optronic manufactures a variety of refractometers to suit the needs of the machinist and manufacturing facility.

Model DR6000 Series Digital Refractometer

Model DR301-95 Digital Handheld Refractometer

HR Series Manual Handheld Refractometers
